

BIG DUTCHMAN

VIV Russia 2011 with a diverse range of Big Dutchman products: innovations for future-oriented poultry farming

Big Dutchman is looking forward to a successful participation at this year's VIV Russia. Next to a broad range of Big Dutchman classics the product range on display also covers brand new products.

For the first time ever on display in Russia is the further developed climate and production computer ViperTouch for efficient poultry farming. Next to the new, easy-to-operate touch screen ViperTouch offers a variety of state-of-the-art functionalities that considerably facilitate poultry management: for instance, it is now possible to connect up to four poultry scales, and enter up to eight different feed targets in the breeder configuration.

AviMax broiler batteries: custom-fit solutions for all needs

The management history is also recorded and can easily be accessed. Also accessible are management trend curves for the previous seven days covering, for instance, feed and water consumption.

Also in terms of broiler batteries, there is no way around the German housing equipment supplier. At VIV Russia, Big Dutchman presents the entire AviMax product family.

The scope of different system types of AviMax is considerable: no matter whether broilers are to be housed in an icy or subtropical climate, whether it concerns an old building or plans for a new building, or whether a building is rather high or very low: Big Dutchman offers custom-fit, economic solutions for all needs. In addition to the proven and tested climate solutions, the housing equipment supplier has furthermore developed a ventilation system which ensures an optimal house climate especially in regions with very warm weather. The results are optimum stocking densities while providing maximum headroom in the bird area, lower building and energy costs as well as optimum air exchange throughout the entire barn.
